	Developer Info. MEDICUS Clinical, LLC 36 Corporate Office Park 20 Rd. ASSERTUS Building Suite 104 Guaynabo, PR 00966 (787) 622-2200 Ambulstory Care Setting: The ambulstory care setting is the most common one for MEDICUS EHR users. Many belong to specialities such as eye care, chiropractic and behavioral health. We don't specifically market to particular speciality areas, so this test plan generically applies to ambulatory care settings.	Product Info: Product Name: MEDICUS EHR Product Version: 1.0 CHPL ID: 15.04.04.3057.Medi.01.00.1.191113	Methods Use to Demonstrate Interoperability: 1) HISP via Direct Protocol (SMTP) 2) HISE exhange 3) HITTPS via secure provider portal Test Medotolody includes relied upon the following softwares: 1) The resulting patient record will be exported in CCDA R2.1 format 2) Validated using the 2023 ONC Cures Update R2.1 and USCDI v1 Validator Tool (att https://ett.healthit.gov/ett/#/validators/ccdar2). 3) § 270.315(b)(1) Transition of Care; Medicus/Erk utilizes the DataMotion messaging capability to support sending and receiving DIRECT messages into EHR 4) § 170.315(b)(2) Cinical Information reconciliation and incorporation; using Eservier Gold Standard Drug Database 5) § 170.315(b)(1) Direct Project; This functionality allows certified EHR to demonstrate interoperability using DIRECT protocols.						
Test Step:	Testing Procedure:	Expected Outcomes:	Key Milestone Date:	Key Milestone:	Outcomes:	Comments:			
1	Identify Trading Partner (TP) and coordinate with TP for sending/receiving clinical documents using production data as described in this RWT plan.	Confirm Trading Partner Confirm ability to send and receive clinical documents Confirm with TP that production data will be used, whether in an actual live environment or a covor of a live environment.	May, 2023						
2	Patient has encounter with care provider and data is captured in EHR	CCDS data elements captured in EHR (system under test) Care provider signs progress note which triggers CCD 2.1 creation. CCD includes the reason for referral, and the referring or transitioning provider's name and office contact information.							
3	Care provider initiates TOC to TP EHR in MEDICUS	 From progress note or chronology area, care provider selects Referrals > New Referral and searches the address book for a provider, can manually add provider's Direct address if not present, then sends referral Care provider receives external email confirmation that referral was sent 	June, 2023						
*	Next steps take place in trading partner's EHR.								
4	Validate that CCD for the patient contains CCDS data elements.	Recipient uses scorecard to grade CCD	June, 2023						
5	Trading partner refers same patient from TP EHR to MEDICUS by generating C-CDA Clinical Document or Referral Note	Care provider selects recipient from directory of Direct addresses and initiates sending of Clinical Document							
6	In MEDICUS, tester acknowledges receipt of valid Clinical Document.	Clinical Document. Tester uses Messages Inbox to locate Clinical Document.							
7	Care provider assigns the CCD to a patient.	Care provider selects the CCD, chooses Incorporate, and searches for the correct patient to assign.	July, 2023						
8	Care provider reconciles the info from the incoming CCD into the patient's chart.	 In the patient's chart, the care provider selects Last Received CCD then Reconcile. The care provider reviews the record, and merges the patient's problems, medications, and medication allegies into the system under test with no duplicates. 	July, 2023						
9	Calculate and compile metrics		August, 2023		Report Range: May1, 2023 through July 31, 2023 Transition of Care C-CDAs sucessfully sent, 0 messages	Physicians in Puerto Rico do not create electornic referrals because of the absence of sharing data between other vendors and the need of a state HIE			
	Atestation: This Real World Testing plan is complete with all required elements, including measures that address all-	certification criteria and care settings. All information in this plan is up to date and fully add	resses the Health IT D	eveloper's Rea	World Testing requirements.

	Developer Info: MEDICUS Clinical, LLC 36 Corporate Office Park 20 Rd. ASSERTUS Building Suite 104 Guaynabo, PR 00966 [787] 622-2200 Ambulatory Care Setting: The ambulatory care setting is the most common one for MEDICUS EHR users. Many belong to specialties such as eye care, chiropractic and behavioral health. We don't specifically market to particular specialty areas, so this test plan generically applies to ambulatory care settings.	Product Info: Product Name: MEDICUS EHR Product Version: 1.0 CHPL ID: 15.04.04.3057.Medi.01.00.1.191113	Methods Use to Demonstrate Interoperability: • Visual inspection and matching of QRDA I data to EHR data • Matching of calculation results from CQMsolution to CMS • API Sandbox testing with CMS for file acceptance Test Medotolody Includes relied upon the following softwares:1) Development Environment: Cypress 6.0 2) Production Environment: Dynamic helath IT CQMsolution 6.0						
Test Step:	Testing Procedure:	Expected Outcomes:	Key Milestone Date:	Key Milestone:	Outcome:	Comment(s)			
1	Identify Trading Partner (TP) and coordinate with TP for calculating and reporting electronic clinical quality measures (eCOMs) using production data as described in this RWT plan.	Confirm Trading Partner Confirm ability to calculate and report eCQMs Confirm with TP that production data will be used, whether in an actual live environment or a copy of a live environment	May, 2023		Functionalities have been set up in copy live environment and multiple test had been performed. During the following months, production data will be used in an actual live environment				
2	Identify six EP (Eligible Professional) eCQMs for RWT.	Based on historical data, select the most popular eCQMs.							
3	Identify a one calendar year reporting period with adequate patient data for reporting.	Admins with sufficient familiarity with the physician practice's clinical activities should be able to choose a period with an appropriate amount of quality data.							
4	Capture and record clinical quality measure (COM) data in Trading Partner's (TP) EHR. Since manual data entry for an adequate quantity of data would be enerous, we will use actual patent data. If TP is integrated with COMselution, COMsolution will capture data through a SOL query, so that when a user runs a COM report, COMsolution puls data derecity from the TP's database. COM report, COMsolution puls data derecity from the TP's database. Alternative approach: Pull in data through CROM files in a	Data ready for report generation.							
5	Correctly calculate numerator, denominator, exclusion and exception values for selected eCQMs.	The CQMsolution report should complete with no errors.							
6	Spot-check 10 patients for each measure, ensuring that some are in the denominator only, some are in the numerator and denominator and, if possible, some are exclusions or exceptions.	Use Patient List to check which categories initial Patient Population (IPP) Denominator (Den). Exclusions (Excl), Numerator (Num) or Exceptions (Excp) each patient falls into. For each spot-check patient, use the drill-down to confirm that the patient data in COMisolution (encounters, codes, demographics) matches the patient data in the EHR and that the patient is correctly categorized in COMsolution.							
7	Upload the generated MIPS QRDA III file to QPP.	The file should upload and be accepted by the environment without error.	July, 2023		Functionalities have been set up in copy live environment and multiple test had been performed. During the following months, production data will be used in an actual live environment				
8	Check the submission environment's measure calculation results and compare them to CQMsolution's calculation results.	All populations of all measures should match.	July, 2023		Functionalities have been set up in copy live environment and multiple test had been performed. During the following months, production data will be used in an actual live environment				
9	Calculate and compile metrics		August, 2023		Functionalities have been set up in copy live environment and multiple test had been performed. During the following months, production data will be used in an actual live environment				
	Atestation: This Real World Testing plan is complete with all required elements, including measures that address all certification	n criteria and care settings. All information in this plan	is up to date and fu	lly addresses the	Health IT Developer's Real World Testing requirements.	•

Medicus All Criteria (RWT) Real World Testing Results 2023

170.315(f)(1)

Table of Contents	Associated Certification Criteria: \$170.315(f)(1) Transmission to immunization registries								
	Measure Description: Create and transmit immunization information. Enable a user to request, access, and display a patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet patient care and in cost control through identification of needed immunizations and elimination of redundant immunizations. In our experience, most immunization registries do not yet handle a bi-directional query/response type of interface. That's why we offered the Alternate Test Approach.								
	Metric Description: 1) 100 percent correct immunization records successfully posted to registry confirmed by visual validation. 2) 100 percent correct correct immunization history records successfully proceived in EHR confirmed by visual validation. 3) Successful Transmission to Public Health Registry will be reviewed for ACK 8. NAK to ensure 100% successful transmission.			Standards Implemented: • \$170.205(e)(4) Ht7 25.1 Implementation Specifications. Ht7 25.1 Implementation Guide for Immunization Messaging, Release 1.5, October 2014 • \$170.207(e)(4) National Drug Code (NOC) Directory—Vaccine NDC Linker, updates through August 17, 2015 • \$170.207(e)(4) National Drug Code (NOC) Directory—Vaccine NDC Linker, updates through August 17, 2015					
	Overlopes Infor MEDICUS Ginical, LIC 36 Corporate Office Park 20 Rd. ASSERTUS Building Suite 104 Gusynabo, PR 00966 (787) 62-2200 Ambulatory care Setting: The ambulatory care setting is the most common one for MEDICUS EMR users. Many belong to specialties usak a spec care, chiropractic and behavioral health. We don't specifically market to particular specialty areas, so this test plan generically applies to ambulatory care settings.	Product Name: MEDICUS 5HR Product Version: 1.0 CVPL ID: 15.04.04.3097 Medi.01.00.1.191113	Methods Use to Demonstrate Interoperability / Test Medioticolog viculous relied upon the following softwares: 1) Webservice 2) HV Standard Code Set CVXVaccine AdministeredOi0: 2.16.840.1.1388.12.292 3) National Drug Code Directory Oi0: 2.16.840.1.1388.6.69 4) SOAP-based standard for transport of Immunisation data 6) PRES wit: https://prxt.web.atchealthop.com/plechub/HU/Server						
Test Step:	Testing Procedure:	Expected Outcomes:	Key Milestone Date:	Key Milestone:	Outcomes:	Comment(s)			
1	Identify Trading Partner (TP) and coordinate with TP for transmitting immunization records using production data as described in this RWT plan.	+ Has a state immunization registry that can receive immunization data - Already has a functional immunization interface or would like to implement one to their registry	May, 2023		In Puerto Rico the government start the IIS implementation to send immunization messages in the second quarter of the year				
2	Implement send-only immunization interface (if Interface not already in place).	Validate that immunization interface is functioning as expected	June, 2023		In Puerto Rico the government start the IIS implementation to send immunization messages in the second quarter of the year				
3	Determine whether test or production interface will be used.	If production, determine whether an actual patient or a test patient will be used.							
4	Create a new immunization record.	 Register a patient or create a new patient "A" in Client EHR and create a current patient encounter Record an immunization in Client EHR 							
5	Run immunization process to send to registry (Note: This is an optional step for batch process registry transmission, rather than real-time).	Confirm immunization process							
6	Access registry to verify that immunization data was received for patient A.	Verify that immunization data was received for patient A	July, 2023						
7	Calculate and compile metrics		August, 2023		Immunization records of four(4) patients were successfully shared with IIS during testing period	Range date: 5/1/2023-7/31/2023			
	Attentation: This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the Health IT Developer's Real World Testing requirements.
